

Please add the following new claims:

11. A method for producing a disposable tissue comprising the steps of:

loading a disposable tissue into an apparatus for producing a disposable tissue, the apparatus comprising a cylindrical molding bushing having a longitudinal, through passage, a table for supporting the molding bushing such that both end portions of the through passage of the molding bushing are exposed to the outside, an upper press installed vertically movably above the table and having a pressing rod to be inserted into the through passage of the molding bushing when the upper press moves downwardly, and a lower press installed vertically movably below the table and having a supporting rod to be inserted into the through passage of the molding bushing when the lower press moves upwardly,

wherein the disposable tissue is loaded into the through passage of the cylindrical molding bushing; and

compressing the disposable tissue between the pressing rod and the supporting rod.

12. A disposable tissue produced by the method of claim 11.
